

App Store & Google Play Production Readiness Guide

1. Developer Accounts

- Google Play Console (US\$25 one-time).
- Apple Developer Program (US\$99/year).
- Organization accounts recommended.
- Configure App Store Connect and Play Console.

2. Architecture

- Clean Architecture.
- Feature-based modules.
- Repository pattern.
- TypeScript.
- Separation of UI/business/data.
- Environment-specific configs (Dev/QA/Staging/Prod).

3. Security

- HTTPS only.
- JWT + Refresh Tokens.
- Secure token storage (Keychain/Keystore/Expo Secure Store).
- Hash passwords with bcrypt/Argon2.
- Rate limiting.
- Input validation.
- Protect against XSS/SQL/NoSQL injection.
- Disable debug in release.
- Certificate pinning if appropriate.
- Never hardcode secrets.
- Avoid logging sensitive data.

4. Authentication

- Email/password.
- Password reset.
- Email verification.
- Biometrics.
- Google Sign-In.
- Sign in with Apple when required.
- Session expiry and secure logout.

5. Privacy & Legal

- Privacy Policy.

- Terms & Conditions.
- Support contact.
- Data deletion process.
- Account deletion if accounts are created.
- Comply with GDPR/CCPA/India DPDP as applicable.

6. Permissions

- Request only required permissions.
- Provide clear purpose strings for Camera, Photos, Notifications, Location, Microphone, etc.

7. UI/UX

- Responsive layouts.
- Accessible fonts and controls.
- Loading/Empty/Error states.
- No placeholder content.
- Professional icons and branding.
- Dark mode if feasible.

8. Performance

- Fast startup.
- 60 FPS animations.
- Lazy loading.
- Pagination.
- Image caching.
- Offline handling.
- Memory optimization.

9. Backend

- REST/GraphQL.
- Pagination.
- Caching.
- Database indexes.
- Logging.
- Monitoring.
- Backups.
- Versioned APIs.

10. Notifications

- Push notifications.
- Deep linking.
- User notification preferences.
- Request permission contextually.

11. Testing

- Unit tests.
- Integration tests.
- End-to-end tests.
- Manual testing on multiple Android/iPhone devices.
- Poor network.
- Low storage.
- Offline.
- Session expiry.

12. Monitoring

- Crash reporting (Sentry/Firebase Crashlytics).
- Analytics.
- Performance monitoring.

13. Payments

- Google Play Billing for digital goods.
- Apple In-App Purchase for digital goods.
- Use appropriate payment methods for physical goods/services.

14. Store Assets

- App icon.
- Splash screen.
- Screenshots.
- Descriptions.
- Keywords.
- Feature graphic (Google).
- Support URL.
- Privacy Policy URL.

15. CI/CD

- GitHub.
- GitHub Actions.
- Automated tests.
- Expo EAS Build or native builds.
- Internal testing.
- TestFlight.
- Production rollout.

16. Release

- Semantic versioning.

- Release notes.
- Rollback strategy.
- Signed builds.
- Production API endpoints only.

17. QA Checklist

- No crashes.
- HTTPS everywhere.
- Permissions justified.
- Privacy Policy available.
- Terms available.
- Account deletion implemented if needed.
- Responsive UI.
- Production icons.
- Notifications tested.
- Signed builds.
- Real-device testing.

18. Common Rejection Reasons

- Crashes.
- Broken login.
- Missing privacy policy.
- Non-functional UI.
- Unnecessary permissions.
- Misleading metadata.
- WebView-only apps.
- Placeholder content.
- Poor user experience.

19. Enterprise Best Practices

- Coding standards.
- ESLint/Prettier.
- Documentation.
- Error boundaries.
- Role-based access control.
- Disaster recovery.
- Incident response.
- Scalable infrastructure.
- Automated backups.
- Regular dependency updates.
